Green Contract Services Commitment Letter:

By signing this Commitment Letter, our organization indicates an intent to join the growing group of leading corporations that are setting emissions reduction targets in line with what climate science says is necessary. By doing so, we recognize the crucial role the business community can play in minimizing the risk climate change poses to the future of our planet.

Thereby, I am pleased to confirm that Green Contract Services Ltd is committing to:

Set near-term science-based emissions reduction targets in line with the SBTi Criteria and Recommendations, and submit them to the SBTi for validations within a maximum of 24 months.

We acknowledge that our commitment will be recognized on the SBTi website as well as on our partner websites at We Mean Business. Companies who are participants of the UN Global Compact will also be recognized on the UNGC webpage.

In addition, to align with the most ambitious aim of the Paris Agreement and to what science dictates is necessary to reduce the destructive impacts of climate change on human society and nature - to reach net-zero global emissions by 2050 at the latest in order to limit global warming to 1.5°C - my company is committing to:

Set net-zero targets, including a long-term science-based target: My company commits to set long-term science-based targets to reach net-zero value chain GHG emissions by no later than 2050 in line with the SBTi Net-Zero Standard and submit it for SBTi validation within a maximum of 24 months.

By committing to set a net-zero target, I also acknowledge that my company will join the Race to Zero campaign.

Near-term science-based targets are 5-10 year GHG mitigation targets in line with 1.5°C pathways.

Net-zero science-based targets are long-term targets that show companies how much they must reduce value chain emissions to align with reaching net-zero at the global or sector level in eligible 1.5°C pathways by 2050 or sooner. The SBTi defines the state of net-zero emissions for companies as reaching a state of no impact on the climate resulting from the organization's GHG emissions.

Reaching a status of science-based net-zero emissions implies the following two conditions:

- Achieving a scale of value chain emissions reductions consistent with the depth of abatement at the point of reaching global net-zero in pathways that limit warming to 1.5°C with no or low overshoot.
- Neutralizing the impact of any source of any residual emissions by permanently removing an equivalent volume of atmospheric CO₂.
